Structured implementation plan

SUMMARY

The visible UI page heading is defined in a single JMIX/Vaadin view descriptor, `src/main/resources/com/profilescraper/view/main_view.xml`, at line 10 as `<h2 text="AI-Powered Candidate Profile Scraper"/>`. This ticket requires renaming that heading to "Direction AI Profile Scraper". A repo-wide search shows the exact heading string appears only in this file; there are no i18n/message bundle files (`messages*.properties`) in the project, so the heading is a hard-coded literal with no translation keys to update. The change is therefore a one-line text edit. Related branding strings (browser tab title, CLI banner, README/pom/docs) use different wording ("Profile Scraper Agent") and are outside the stated scope, but are flagged as open questions since the ticket mentions "Direction AI branding".

TICKET TYPE

Chore

TEST STRATEGY

The repository currently has no automated test suite (`src/test` is absent) and no i18n message bundles, so verification is manual: (1) build the app with `mvn -q -DskipTests package` (or the project's standard build) to confirm the view XML still parses; (2) run the JMIX/Vaadin web UI and visually confirm the MainView renders the heading "Direction AI Profile Scraper" with no layout/alignment regressions; (3) confirm no other UI screen shows the old heading. Optionally, a lightweight guard could be added later but adding a test framework is out of scope for this rename.

Impacted files

`src/main/resources/com/profilescraper/view/main_view.xml`

Contains the visible page heading `<h2 text="AI-Powered Candidate Profile Scraper"/>` (line 10) — the only occurrence of the exact heading string that must be renamed.

Proposed changes

src/main/resources/com/profilescraper/view/main_view.xml

[Modify](#)

Change the page header on line 10 from `<h2 text="AI-Powered Candidate Profile Scraper"/>` to `<h2 text="Direction AI Profile Scraper"/>`. Leave the subtitle `<span>` (line 11) and layout untouched so no alignment changes are introduced.

Risks

- No automated tests exist in the repo, so regressions can only be caught by a manual visual check.
- The new label is slightly shorter than the old one; while unlikely, confirm no CSS/`classNames` styling depended on the previous text length (the h2 has no custom classNames, so risk is low).
- Scope ambiguity: the ticket says 'update all UI occurrences' but the exact heading string exists only once; if reviewers expect the browser tab title or CLI banner to also change, additional edits would be needed.

Open questions

- Should the browser tab / view title also be rebranded? `main\_view.xml` line 3 sets `title="Profile Scraper Agent — AI Recruitment Tool"` and `MainView.getPageTitle()` returns "Profile Scraper Agent" — these are not the visible h2 heading but relate to branding.
- Are non-UI branding strings (README.md, pom.xml description, docs/*.html headings, Main.java CLI banner, ExcelExporter title cell) in scope, or is the change limited strictly to the web UI heading?
- The Notes mention coordinating with design on branding assets/colors — are any color/asset changes expected as part of this ticket, or is it text-only?
